

# Quaternary Fault and Fold Database of the United States

As of January 12, 2017, the USGS maintains a limited number of metadata fields that characterize the Quaternary faults and folds of the United States. For the most up-to-date information, please refer to the [interactive fault map](#).

## Crater Bench faults (Class A) No. 2433

Last Review Date: 1999-10-01

## Compiled in cooperation with the Utah Geological Survey

*citation for this record:* Black, B.D., Hylland, M.D., and Hecker, S., compilers, 1999, Fault number 2433, Crater Bench faults, in Quaternary fault and fold database of the United States: U.S. Geological Survey website, <https://earthquakes.usgs.gov/hazards/qfaults>, accessed 12/14/2020 02:56 PM.

<b>Synopsis</b>	Poorly understood faults near Crater Bench possibly related to the Drum Mountains fault zone [2432].
<b>Name comments</b>	<b>Fault ID:</b> Refers to fault number 8-4 of Hecker (1993 #642).
<b>County(s) and State(s)</b>	JUAB COUNTY, UTAH MILLARD COUNTY, UTAH
<b>Physiographic province(s)</b>	BASIN AND RANGE
<b>Reliability of</b>	Good

<b>location</b>	<p>Compiled at 1:24,000 scale.</p> <p><i>Comments:</i> Mapped or discussed by Ertec Western, Inc. (Schell, 1981 #2844), Galyardt and Rush (1981 #4541), Oviatt and others (1994 #4542), and Hintze and Davis (in preparation #4539). Fault traces from mapping of Galyard and Rush (1981 #4541).</p>
<b>Geologic setting</b>	<p>Several northeast-trending subparallel and en-echelon normal faults near Crater Bench in the Sevier Desert in west-central Utah. The faults are in a wide zone northeast of the Drum Mountains fault zone [2432]. Crater Bench mainly exposes Quaternary basalt that are locally mantled by deposits of Pleistocene Lake Bonneville.</p>
<b>Length (km)</b>	16 km.
<b>Average strike</b>	N21°E
<b>Sense of movement</b>	Normal
<b>Dip Direction</b>	<p>W</p> <p><i>Comments:</i> Mostly west, some short east-dipping faults</p>
<b>Paleoseismology studies</b>	
<b>Geomorphic expression</b>	<p>Scarps as much as 7 m high are formed on 900 ka basalts. Mapping by Galyardt and Rush (1981 #4541) shows some of the faults are partly covered by lacustrine deposits.</p>
<b>Age of faulted surficial deposits</b>	Early Quaternary basalt.
<b>Historic earthquake</b>	
<b>Most recent prehistoric deformation</b>	<p>latest Quaternary (&lt;15 ka)</p> <p><i>Comments:</i> The faults appear to be related to the Drum Mountains fault zone [2432]; faults within the basalts are known only to post-date 900 ka, but their continuation and alignment with faults in post-Bonneville deposits implies post-Bonneville movement.</p>

<b>Recurrence interval</b>	
<b>Slip-rate category</b>	Less than 0.2 mm/yr
<b>Date and Compiler(s)</b>	1999 Bill D. Black, Utah Geological Survey Michael D. Hylland, Utah Geological Survey Suzanne Hecker, U.S. Geological Survey
