

# Quaternary Fault and Fold Database of the United States

As of January 12, 2017, the USGS maintains a limited number of metadata fields that characterize the Quaternary faults and folds of the United States. For the most up-to-date information, please refer to the [interactive fault map](#).

## North of Wah Wah Mountains faults (Class A) No. 2459

Last Review Date: 2004-07-01

### Compiled in cooperation with the Utah Geological Survey

*citation for this record:* Black, B.D., Hylland, M.D., and Hecker, S., compilers, 2004, Fault number 2459, North of Wah Wah Mountains faults, in Quaternary fault and fold database of the United States: U.S. Geological Survey website, <https://earthquakes.usgs.gov/hazards/qfaults>, accessed 12/14/2020 02:56 PM.

<b>Synopsis</b>	Poorly understood late Quaternary faults north of the Wah Wah Mountains. No information on the size or morphology of the fault scarps have been reported.
<b>Name comments</b>	<b>Fault ID:</b> Refers to fault number 9-24 of Hecker (1993 #642).
<b>County(s) and State(s)</b>	MILLARD COUNTY, UTAH
<b>Physiographic</b>	

<b>Physiographic province(s)</b>	BASIN AND RANGE
<b>Reliability of location</b>	<p>Good Compiled at 1:250,000 scale.</p> <p><i>Comments:</i> Mapped or discussed by Ertec Western, Inc. (Schell, 1981 #4598) and Hintze and Davis (2002 #6754, 2003 #6741). Fault traces from 1:100,000-scale mapping of Ertec Western, Inc. (Schell, 1981 #4598).</p>
<b>Geologic setting</b>	Group of normal faults north of the Wah Wah Mountains on the northwestern margin of Wah Wah Valley. The area is in the Confusion Basin of southwestern Utah, a Paleozoic center of deposition. Mountains in the basin are comprised almost exclusively of sedimentary rocks, valleys contain lake deposits and alluvium.
<b>Length (km)</b>	12 km.
<b>Average strike</b>	N19°W
<b>Sense of movement</b>	Normal
<b>Dip Direction</b>	E; NE
<b>Paleoseismology studies</b>	
<b>Geomorphic expression</b>	Scarps on alluvium (Schell, 1981 #4598).
<b>Age of faulted surficial deposits</b>	Late Quaternary (<500 ka; Schell, 1981 #4598), which we consider to be late and middle Quaternary.
<b>Historic earthquake</b>	
<b>Most recent prehistoric deformation</b>	<p>middle and late Quaternary (&lt;750 ka)</p> <p><i>Comments:</i> The faults are interpreted by Ertec Western, Inc. (Schell, 1981 #4598) to be Pleistocene in age and are on middle or late Quaternary (&lt;500 ka) deposits.</p>
<b>Recurrence interval</b>	

<b>Slip-rate category</b>	Less than 0.2 mm/yr
<b>Date and Compiler(s)</b>	2004 Bill D. Black, Utah Geological Survey Michael D. Hylland, Utah Geological Survey Suzanne Hecker, U.S. Geological Survey
